VI. Material events

During the reporting period, there was no material investment losses, no major guarantees for external parties, no financial crisis incurred by the Group's subsidiaries or associates, or their takeovers by regulators.

VII. Risk governance and strategies

(1) Group risk governance status

The Company established a risk management organizational system with the Board shouldering the ultimate responsibility, the management responsible for direct stewardship, underpinned by risk management departments, with close participation of all relevant functions and covering all branch offices and positions. The boards of

the Company and its subsidiaries are the top decision-making body in risk management, and bear the ultimate responsibility for their respective risk management systems and status of operation. The Board established the Risk Management & Related Party Transactions Committee, which was vested by the Board to perform risk management functions. In 2020, the Committee convened 6 sessions, reviewing relevant risk-related items and reports. The Company management confirmed the effectiveness of internal control of both the issuer and its associates.

The Company Management Committee, which set up the position of Group Chief Risk Officer, is charged with organizing and implementing risk management activities and serves as the body of consultation and deliberation in risk and compliance management. Under the Committee there is Group Risk Management and Audit Work Commission, responsible for formulation of risk management plans, work co-ordination and execution & supervision.

The Group and its insurance and asset management subsidiaries have all set up independent risk management departments, charged with coordinating the implementation of management decisions in risk management, including organizing, supervising, and guiding other departments in daily risk management as per decisions of the management. Other functional departments of the Group and branch offices of its subsidiaries have all designated Risk Responsible Person and Risk Management Personnel, performing their duties as within their scope of responsibilities and responsible for communications with risk management departments.

(2) Group risk management strategies and their implementation

The overall risk management strategy is: within the limits of reasonable risk management objectives, establish an integrated risk management system, execute the transmission of risk management objectives and “look-through” management of the Group, its subsidiaries and their branch offices, improve the closed-loop management mechanisms in a bid to fulfill the objective of being “the best in risk control capabilities”.

The Group drafted, as per regulatory solvency regulations, its Risk Appetite Framework (RAF) which is reviewed annually and updated when necessary. In 2020, the overall status was good of execution of the RAF of both the Group and its subsidiaries, which was also reported to the Board Risk Management Committee on a quarterly basis.

VIII. Group specific risks

(1) Risk contagion

As per regulatory requirements, the Company has set up risk quarantine mechanisms for its business operation, personnel management, fund management, information systems and internal transactions, etc., to effectively prevent the spread of relevant risks within the Group and to minimize the risk of contagion.

(2) Risk due to opaque organizational structure

As a listed insurance holding group, the Company boasts a clear ownership structure and sound corporate governance. The focus on insurance as its core business supplemented by other related business effectively prevents the risk of losses incurred by the Company as a result of opaque organizational structure.

(3) Concentration risk

As per regulatory requirements, the Company and its member insurers identify, evaluate, monitor and report on the concentration risk of various types on a regular basis, including the concentration risk of investment and reinsurance counter-parties, insurance and non-insurance business and investment assets, which effectively prevented the aggregation of single risks or risk portfolios from member companies at the Group level and the resulting adverse effect to the Group's solvency and liquidity.

(4) Non-insurance risk

The Company's industrial investment and allocation of resources in non-insurance areas comply with and serve its strategic positioning of focusing on the core business of insurance. The related risks and influence are limited. In strict compliance with regulatory rules, it prudently manages investment in non-insurance areas, continues to observe and prevent the adverse effect on the solvency of both the Group and its member insurers by the business operation of its non-insurance member companies.
