VI. Material events

During the reporting period, there was no material investment losses, no major guarantees for external parties, no financial crisis incurred by the Group's subsidiaries or associates, or their takeovers by regulators.

VII. Risk governance and strategies

(1) Group risk governance status

The Company established a risk management organizational system with the Board shouldering the ultimate responsibility, the management responsible for direct stewardship, underpinned by risk management departments, with close participation of all relevant functions and covering all branch offices and positions. The boards of the Company and its subsidiaries are the top decision-making body in risk management, and bear the ultimate responsibility for their respective risk management systems and status of operation. The Board established the Risk Management & Related Party Transactions Committee, which was vested by the Board to perform risk management functions. In 2021, the Committee convened 6 sessions, reviewing relevant risk-related items and reports.

The Company Management Committee is responsible for organizing risk management

implementation, setting up the position of Group Chief Risk Officer, and reporting risk management status and risk profile to the Risk Management & Related Party Transactions Committee on a quarterly basis. Under the Committee there is Group Risk Management and Audit Work Commission, responsible for formulation of risk management and compliance plans, work co-ordination and execution & supervision as per decisions made by the Company.

The Risk Management Centre was set up at Group headquarters, responsible for coordination of daily risk management, and under it there are the Department of Risk Control and the Department of Legal Affairs and Compliance, in charge of coordinating daily risk monitoring, legal and compliance, and enhancement of internal control. Our insurance subsidiaries have all set up independent risk management departments, charged with coordinating the implementation of management decisions in risk management, including organizing, supervising, and guiding other departments in daily risk management as per decisions of the management. Other functional departments of the Group and branch offices of its subsidiaries have all designated Risk Responsible Person and Risk Management Personnel, performing their duties as within their scope of responsibilities and responsible for communications with risk management departments.

(2) Group risk management strategies and their implementation

The overall risk management strategy is: set reasonable risk management objectives based on development strategies, organisational structure and business features of the Company, and under the guidance of the objectives, support and promote fulfillment of business objectives and strategic planning of the Company via a sound risk management system, stringent risk management processes, and advanced risk management mechanisms and tools.

The Group drafted, as per regulatory solvency regulations, its Risk Appetite Framework (RAF) which is reviewed annually and updated when necessary. In 2021, the overall execution status of the RAF of both the Group and its insurance subsidiaries was good, with reports presented to the Risk Management & Related Party Transactions Committee on a quarterly basis.

VIII. Group specific risks

(1) Risk contagion

As per regulatory requirements, the Company has set up risk quarantine mechanisms for its business operation, personnel management, fund management, information systems and internal transactions, etc., to effectively prevent the spread of relevant

risks within the Group and to minimize the risk of contagion.

(2) Risk due to opaque organizational structure

As a listed insurance holding group, the Company boasts a clear ownership structure and sound corporate governance. The focus on insurance as its core business supplemented by other related business effectively prevents the risk of losses incurred by the Company as a result of opaque organizational structure.

(3) Concentration risk

As per regulatory requirements, the Company and its member insurers identify, evaluate, monitor and report on the concentration risk of various types on a regular basis, including the concentration risk of investment and reinsurance counter-parties, insurance and non-insurance business and investment assets, which effectively prevented the aggregation of a single risk or risk portfolios at the Group level, or a material threat to the Group's solvency and liquidity.

(4) Non-insurance risk

The Company takes non-insurance risk management very seriously and stays focused on the core business of insurance. In strict compliance with regulatory rules, it prudently manages investment in non-insurance areas, pro-actively manages and prevents the adverse effect on the solvency of both the Group and its member insurers by the business operation of its non-insurance member companies, in a bid to safeguard policyholder's interests.
